

I am a licensed user of frequencies between 2MHz and 80MHz and was amazed at the Commissions endorsement of Broadband over Power lines (PBL). This application may some day be of value, but only after present power line systems have been designed and modified to reduce noise interference with other licensed users of these frequencies. Today's technology will: 1) create noise in excess of FCC current rules; 2) Be a nuisance to other licensed services in the affected bands; 3) Greatly reduce health and welfare radio traffic in times of emergencies such as hurricanes, floods, fires, and other disasters. I therefore, am against this Notice of Proposed Rulemaking and support the comments and actions of the American Radio Relay League (ARRL). Thank You  
Frederick W. Stutske, P.E.
